SUMMARY

Final-year Computer Engineering student who builds Software and AI systems, from on-device model inference through backend, frontend, and deployment. Part of the team who developed ParaVision, a real-time edge-AI medical diagnostic system, built as the technical core of TeamABU2026's grand-prize-winning entry at the Huawei ICT Skills Competition Global Finals (Shenzhen, China, June 2026), competing against teams from 40 countries. Also delivers production web applications and third-party API integrations for freelance clients, end to end.

EDUCATION

Ahmadu Bello University (ABU), Zaria, Nigeria

B.Eng. in Computer Engineering, Final Year

KEY ACHIEVEMENT

Huawei ICT Skills Competition Global Finals

Grand Prize, Shenzhen, China (June 2026). Represented Nigeria as part of TeamABU2026, competing against teams from 40 countries.

FEATURED PROJECT

ParaVision: Edge-AI Medical Detection System | *Final Year Project*

- Engineered the full stack independently: FastAPI backend, React/Electron desktop frontend, systemd autostart services, and USB thermal printer output via custom udev rules.
- Deployed two AI models on an Orange Pi AI Pro 20T; YOLOv8n for malaria detection and MobileNetV2 for stool parasite detection via Huawei's CANN 6.3.RC2 toolchain.
- Implemented WHO-standard parasite density and RBC count calculations with multilingual print labels.
- Diagnosed and resolved deep systems issues end to end: Linux session/display configuration (XFCE/LightDM autologin), systemd service failures, Node.js heap and dependency conflicts, and NumPy ABI mismatches.

ADDITIONAL PROJECTS

- Wearable Sickle Cell Crisis Prediction System:** An Arduino Nano-based wearable simulated in Proteus, with weighted risk scoring and LED/buzzer alerts.
- LawXperience:** A law firm website built end to end, including full Paystack payment gateway integration (lexxperience.com).

FREELANCE WEB DEVELOPMENT

Built and deployed a tiered pricing page for Nigerian clients via Netlify/GitHub Pages.

TECHNICAL SKILLS

- AI & Backend:** YOLOv8, MobileNetV2, ONNX Runtime, CANN, FastAPI, Python.
- Web Development:** React, Electron, JavaScript/HTML/CSS, Paystack integration, Domain name purchase, Netlify/GitHub Pages.
- Systems & Deployment:** Linux (XFCE/LightDM), systemd, Node.js/npm environment management, udev.
- Embedded & Circuit Design:** Arduino Nano/ESP32, Proteus simulation, circuit design & prototyping.
